

AFS Global STEM Educators

Full-Scholarship Virtual Exchange Program

With global challenges such as AI and climate change reshaping our world, equipping educators to foster global citizenship and sustainability is critical. The Global STEM Educators virtual exchange program empowers secondary-level STEM teachers with skills to integrate sustainability and global competence into their classrooms. Designed for in-service educators, the program provides resources on sustainability and global citizenship, while participants develop strategies to bridge local and global perspectives in STEM. Educators earn the AFS Global Competence Certificate and join a network of global educator alumni.
